## GRADER PLATE / END BIT

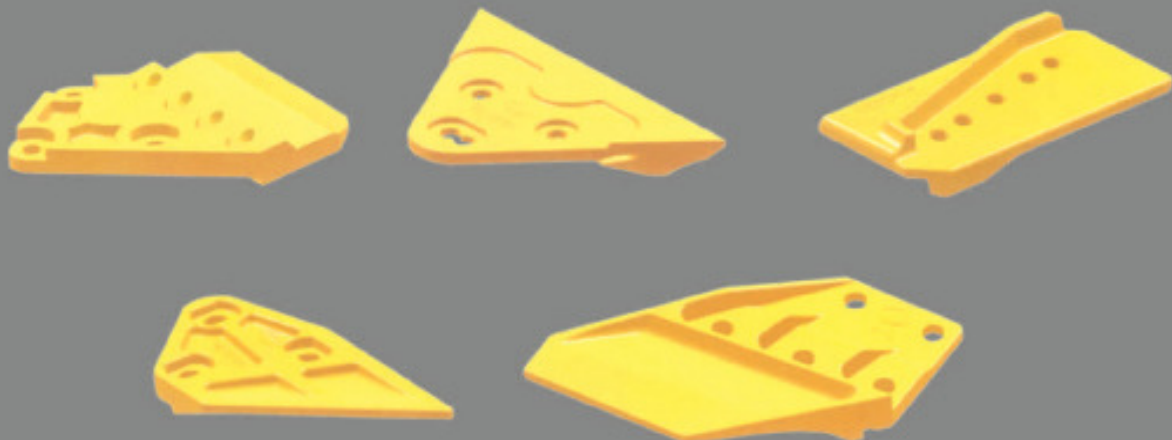

CATERPILLAR SERIES

KOMATSU SERIES

## SIDE CUTTER / CUTTING EDGE

The cutting edge and other critical components are fabricated from quenched and tempered high strength heat-treated alloy plate. Drag tapered body design reduce maintenance costs by reducing drag which causes abrasion. Side Cutter and Cutting Edge are available for all machines/models for which tooth point and adaptors are offered.

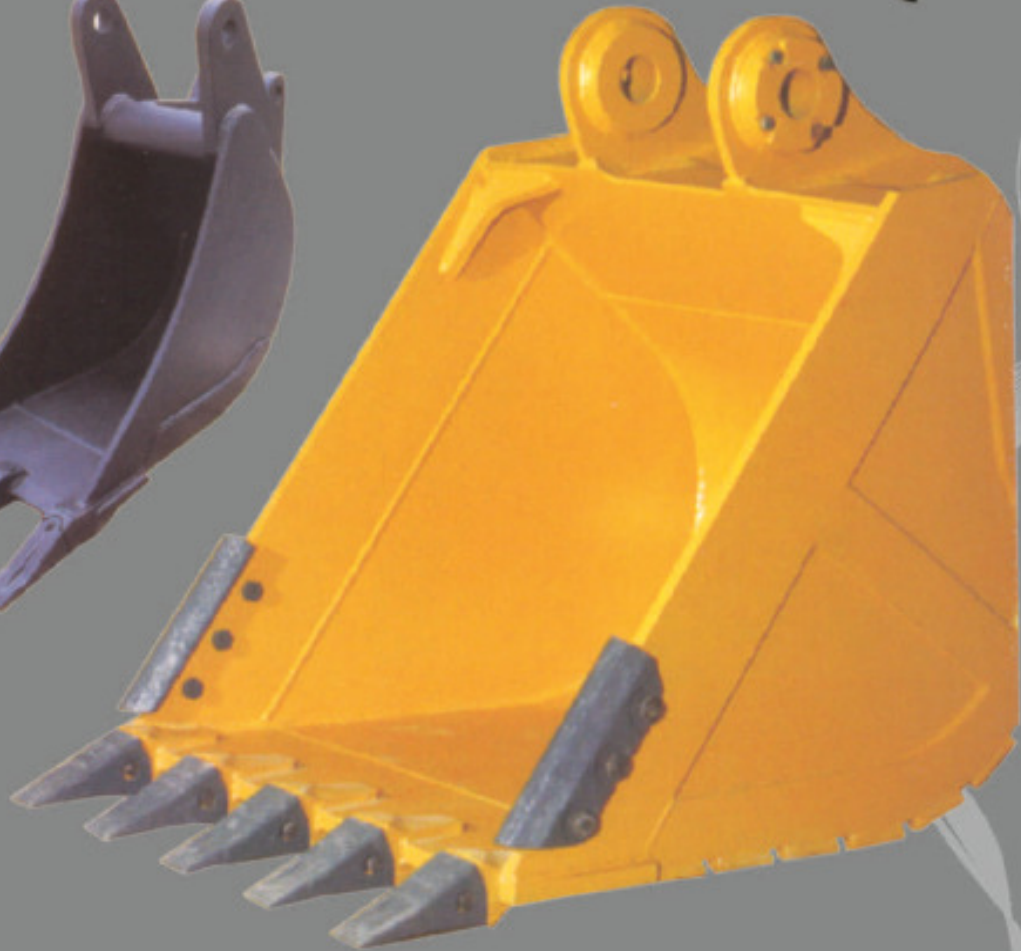

## BUCKET / RIPPER

Compare bucket weight, shell, thickness, cutting edge hardness, and reasonable price, you will quickly realise why the Aries bucket is worthy of replacing OEM parts.

**General Purpose** - Digging of soil, clay, and loading sand, earth, and gravel.

**Heavy Duty** - Digging of hard soil, soil with soft stones, and broken stones and gravel. This type is stronger and more wear resistant than general purpose buckets.

**Rock Duty** - Digging of earth or soil with hard rocks and stones as well as loading solid rocks and ore. This series has a stronger skeleton and additional wear materials in the forms of lines and plates.

## LOCKING SYSTEM

Locking Systems are available for all machines/models for which tooth point and adaptors are offered.

## BOLTS

Bolts are available for all machine models for which tooth point and adaptors are offered, as well as all machines for which undercarriage parts offered.
